

Polaris Dashboard Service

The Polaris Dashboard Service is a great compliment to the RDS and Laptop systems. The Dashboard is a complete solution for tracking the status and configuration of all RDS and Laptops within your organization. Features of the Dashboard include:

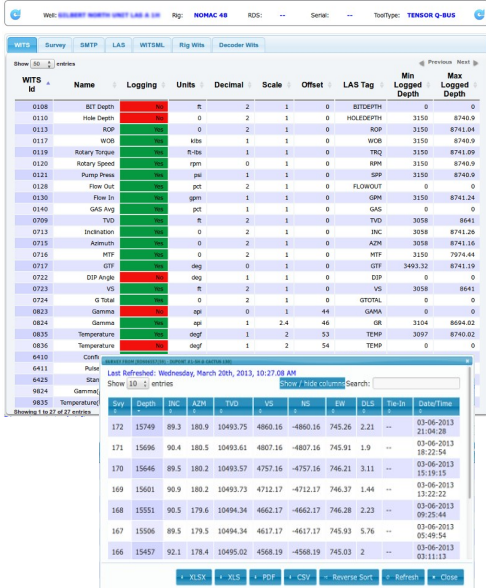

Real-time System Status

- All Polaris systems automatically report to the Dashboard every 15 seconds providing a pseudo real-time display of all data received by the system on-site
- Full listing and status of all systems including click-able links to systems that are available for remote login
- User selectable columns on the list including rig status, contact information, depth and survey data, well information and many others
- Remote monitoring of each system individually by opening windows for each and selecting the data to be displayed
- Geographic location mapping of systems including current weather conditions and pop-up status windows

Database Backup Service

- Database backups automatically sent to the Dashboard for storage and disaster recovery options
- Permanent storage of "TD" backups at the end of each job for a complete database archive library

System Configuration and Survey Diagnostics

- Survey data reports in PDF, CSV, XLS and XLSX formats
- Complete configuration report for each system allowing remote diagnostic checks
